

Little Hearts Matter

Hypoplastic Left Heart Syndrome

Lots of our young members have this condition.

All the differences in this heart are on the left side, your left side. This heart problems means that without surgery the heart can't pump oxygen filled blood around the body. It means that George can't get the oxygen he carries through to every part of the body.

Normally three operations help to reroute the blood and make the circulation of blood work better. Look at the left side of the heart to see the differences.
