

Little Hearts Matter

Tricuspid Atresia

Young LHM members with this condition have problems on the right side of their heart. Having TA means that blood can't get to the lungs to pick up oxygen.

George can't get from the body to pick up the oxygen he needs. Operations help to re route the blood to the lungs and makes the circulation work better.

Have a look at the Tricuspid heart and the normal heart to see the difference.
